Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

::
        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Score

Winkles J.A., Friesel R., Alberts G.F., Janat M.F., Liau G.;

"Elevated expression of basic fibroblast growth factor in an immortalized rabbit smooth muscle cell line.";

Am. J. Pathol. 143:518-527(1993).

-i- FUNCTION: THE HEPARIN-BINDING GROWTH FACTORS ARE ANGIOGENIC AGENTS IN VIVO AND ARE POTENT MITOGENS FOR A VARIETY OF CELL TYPES IN VITRO. THERE ARE DIFFERENCES IN THE TISSUE DISTRIBUTION AND CONCENTRATION OF THESE 2 GROWTH FACTORS.

-i- SUBUNIT: MONOMER.

-i- MISCELLANEOUS: THIS PROTEIN BINDS HEPARIN MORE STRONGLY THAN DOES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-FEB-1996 (Rel. 33, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Trochta O.A., Jacobs, R.M., LaMaire J.;

"The role bFGF in canine Hemangiosarcoma.";

Submitted (APR-1998) to the EMBL/GenBank/DDBJ databases.

C -! FUNCTION: WIDE-SPECTRUM MITGGENIC, ANGIOGENIC, AND NEUROTROPHIC FACTOR. IMPLICATED IN A MULTITUDE OF PHYSIOLOGIC AND PATHOLOGIC PROCESSES, INCLUDING LIMB DEVELOPMENT, ANGIOGENESIS, WOUND HEALING, AND TUMOR GROWHL. POTENT MITGGEN AND CHEMOATTRACTANT FOR MESENCHYME-DERIVED CELLS. IMPLICATED IN THE DIFFERENTIATION, PROLIFERATION, AND MAINTENANCE OF CELLS IN THE CENTRAL MERVOUS SYSTEM AND IN BOME FORMATION. MAJOR ANGIOGENIC FACTOR THAT ALSO C. SUSTEM AND IN BOME FORMATION. MAJOR ANGIOGENIC FACTOR THAT ALSO C. SUSTEM AND SECONAS A QUATERNARY COMPLEX WITH TWO FGFR1 AND AT LEAST ONE HEPBARN SULFATE (BY SIMILARITY).

C -!- SIMILARITY: BELONGS TO THE HEPARIN-BINDING GROWTH FACTORS FAMILY. BE BELONGS TO THE HEPARIN-BINDING GROWTH FACTORS FAMILY.
